Contextualisation

The aim of the course is to make students familiar with the concepts, principles, theories and methodologies of Environmental economics. After completing the course, students are expected to 1) be able to analyze environmental problems from an economic viewpoint, 2) understand and identify the economic values of ecosystems, 3) know the common concepts and theories around natural resource management, with emphasis on uncertain contexts, and 4) know the basics of environmental policy analysis. While these goals aim to provide students with knowledge about the terminology, methodology, principles and theories of Environmental economics, they will also allow them to develop skills to apply knowledge acquired during their studies in Tourism -both in Economics, and more specifically in Environmental economics- to specific tourism contexts. No doubt, this will be very useful for their career development.

Requirements

Academic year	2014-15
Subject	20521 - Environmental Economics in Tourist Areas
Group	Group 30, 2S, GTUR
Teaching guide	F
Language	English

Recommendable

It is highly recommended students are familiar with Microeconomics, especially with Consumer theory.

Skills

Specific

- * CE-9. Applying key technologies used to study reciprocal links between the physical and human environment in different tourism frameworks, particularly those used to assess the environmental impacts of such activities, their consequences on the landscape and the transmission of scientific information so as to facilitate their application in academic and professional circles..
- * CE-10. Applying concepts, techniques and an understanding of different scientific fields to the resolution of problems (with adequate legislative knowledge), promotion of development, creation of wealth, and improved quality of life (for tourists and residents alike) through public and private sectoral planning, spatial planning, risk prevention, conservation, and policies in the fields of sustainability and equality, with quality of life and tourism experiences as key factors at all times..
- * CE-11. Demonstrating a command of a wide range of analytical and observational strategies, developed through habitual research methods used in different scientific fields during his/her academic training and consolidated in the workplace. es students have learnt about during their degree..

Generic

- * CG-1. Demonstrating and possessing a basic knowledge and basic understanding of tourism-related subjects through different scientific disciplines, together with their epistemological evolution and the links between each scientific discipline and all the other tourism-related ones, based on knowledge acquired at secondary school and onward up to a level that guarantees an awareness of spearhead studies in this field..
- * CG-2. Knowing how to apply technical and methodological knowledge to his/her work and doing so in a professional manner, integrating the different tourism-related subject areas that he/she has studied. Possessing the necessary skills and demonstrating them by putting forward and defending arguments and solving problems in relevant subject areas..
- * CG-3. Having the capacity to gather and interpret relevant quantitative, qualitative and spatial data, so as to make judgements that entail critical reflection on relevant tourism-related subjects of a spatial, social, economic, legal, scientific and ethical nature..

Basic

- * You may consult the basic competencies students will have to achieve by the end of the degree at the following address: <http://www.uib.eu/study/grau/Basic-Competences-In-Bachelors-Degree-Studies/>

Content

Theme content

MODULE I. INTRODUCTION

- Unit 1. Introduction to natural resource and environmental economics
- Unit 2. Environment and market failures

Academic year	2014-15
Subject	20521 - Environmental Economics in Tourist Areas
Group	Group 30, 2S, GTUR
Teaching guide	F
Language	English

Unit 3. Economics, politics and the environment

MODULE II. ECONOMIC VALUATION OF THE ENVIRONMENT

Unit 4. The economic value of the environment

Unit 5. Welfare measures

Unit 6. An overview of economic valuation methods

Unit 7. Contingent valuation method

Unit 8. Travel cost method

MODULE III. NATURAL RESOURCE ECONOMICS

Unit 9. Natural resource management

MODULE IV. ENVIRONMENTAL POLICY

Unit 10. Environmental policy tools

Teaching methodology

In-class work activities

Modality	Name	Typ. Grp.	Description	Hours
Theory classes	Theoretical classes	Large group (G)	Master classes to acquire knowledge about theoretical issues related to Environmental economics.	24
Practical classes	Discussion of case studies and readings	Large group (G)	To put into practice the acquired theoretical knowledge and apply it to specific situations, as well as to promote discussions among students, different case studies and articles will be analyzed. There is the possibility that some conference related to environmental economic issues is held during the course. If so, students will be asked to attend it and tests will include some questions about the conference topic.	18
Assessment	Final exam	Large group (G)	A final exam will be carried out to assess knowledge acquired by the students during the course.	1.5
Assessment	Mid-term exam	Large group (G)	A mid-term exam will be carried out to assess knowledge acquired by the students during the course.	1.5

At the beginning of the semester a schedule of the subject will be made available to students through the UIBdigital platform. The schedule shall at least include the dates when the continuing assessment tests will be conducted and the hand-in dates for the assignments. In addition, the lecturer shall inform students as to whether the subject work plan will be carried out through the schedule or through another way included in the Campus Extens platform.

Distance education work activities

Academic year	2014-15
Subject	20521 - Environmental Economics in Tourist Areas
Group	Group 30, 2S, GTUR
Teaching guide	F
Language	English

Modality	Name	Description	Hours
Individual self-study	Analysis of case studies and readings	Analysis of case studies and readings proposed by the teacher during the course.	40
Individual self-study	Study	Study of the theoretical issues learnt during the master classes.	65

Specific risks and protective measures

The learning activities of this course do not entail specific health or safety risks for the students and therefore no special protective measures are needed.

Student learning assessment

To pass the subject, students will be required to get at least 4 over 10 marks in the final exam. On the other side, students should know that, according to academic rules, they will have the right to do a test on a different date from the official one in a series of cases. It is highly recommendable students carefully read the academic rules before asking for a change of an exam date. These cases should take place not only on the same day but also at the same time as that of the official test and they will have to be proved by students.

Final exam

Modality	Assessment
Technique	Objective tests (retrievable)
Description	A final exam will be carried out to assess knowledge acquired by the students during the course.
Assessment criteria	A final exam will be carried out to assess knowledge acquired by students during the course. The exam will be a multiple choice test. It can also include some true/false questions that will have to be reasoned out. The exam will also include questions about the readings and case studies students will be required to read during the course.

Final grade percentage: 50%

Mid-term exam

Modality	Assessment
Technique	Objective tests (non-retrievable)
Description	A mid-term exam will be carried out to assess knowledge acquired by the students during the course.
Assessment criteria	A mid-term exam will be carried out to assess knowledge acquired by students during the course. The exam will be a multiple choice test. It can also include some true/false questions that will have to be reasoned out. The exam will also include questions about the readings and case studies students will be required to read during the course.

Final grade percentage: 50%
